• Abstract: **PROBLEM TO BE SOLVED:** To obtain a mat comprising glass fibers useful as a reinforcement and a dimensional stabilizer for preparing a large number of inorganic, polymeric and/or natural fibrous webs and foam laminate products, to provide a method for producing the mat and to obtain a laminate.

SOLUTION: This mat is obtained by preparing the mat by wet laying a slurry containing the glass fibers and novolac resin particles and further adding an aqueous solution or a slurry containing a cross-linking agent for the novolac resin. The method for producing the mat is provided and the laminate is characterized as comprising the fiber glass mat.
